

HILLCO SC1500

Specialty Crop Header

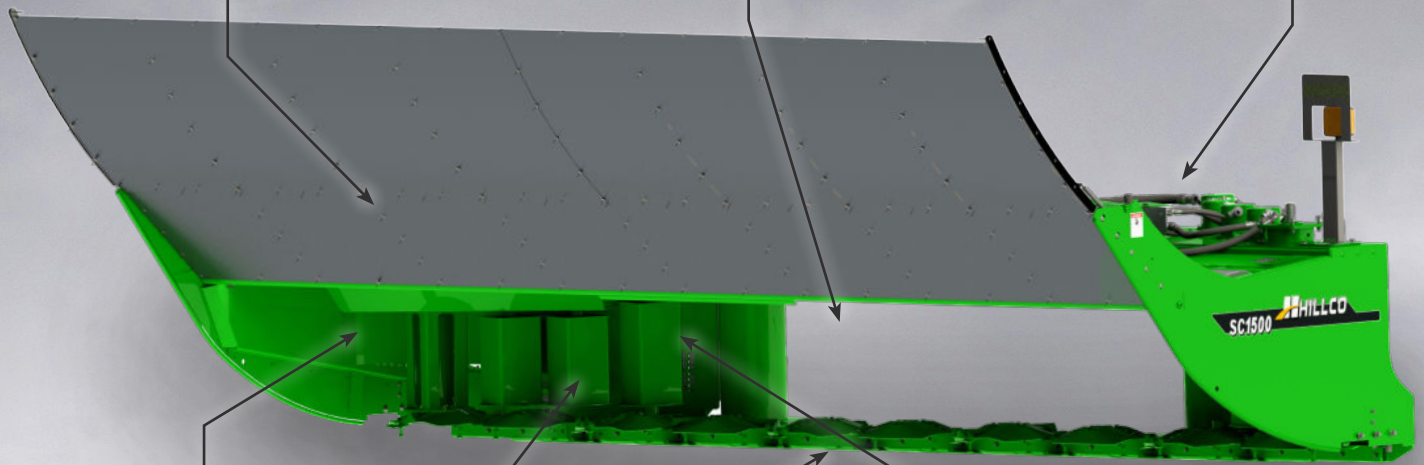

Purpose Built

The SC1500 platform is a purpose built header for gently handling all specialty seed crops to maintain maximum yield at a much faster speed than conventional windrowers so you can windrow more acres during optimal cutting times.

▶▶ Curved knockdown bar helps reduce crop impact to minimize shatter. Lower profile while in transport for better vision.

▶▶ The SC1500 is equipped with service lights for night time maintenance.

▶▶ The SC1500 adapts to the W260R to fully utilize John Deere's Constant Cutterbar Technology.

▶▶ Smooth inner ceiling to improve crop flow, shatter, and reduced pinning.

▶▶ Taller drums create superior airflow, leading to less crop contact and shatter.

▶▶ Purpose built to reduce areas for seed accumulation, helping to keep header cleaning time low and your crop quality high when switching between fields.

▶▶ Rotary cutter bar allows for harvesting speeds at 10+ MPH while not compromising yield.

▶▶ The drum speed is independent from left and right, controlled by a speed dial from the cab.
