

# HILLCO SC1500

## Specialty Crop Header

### Purpose Built

The SC1500 platform is a purpose-built header designed to gently handle all specialty seed crops, preserving maximum yield while operating faster than conventional windrowers. This allows you to windrow more acres during optimal cutting times.

▶▶ Curved knockdown bar helps reduce crop impact to minimize shatter. Lower profile while in transport for better vision.

▶▶ The SC1500 is equipped with service lights for night time maintenance.

▶▶ The SC1500 adapts to the W260R to fully utilize John Deere's Constant Cutterbar Technology.

▶▶ Smooth inner ceiling to improve crop flow, shatter, and reduced pinning.

▶▶ Taller drums create superior airflow, leading to less crop contact and shatter.

▶▶ Designed and built to reduce the header cleaning time between crop varieties

▶▶ Optional wet kit automatically sprays the cutterbar with the solution that reduces the amount of honeydew buildup allowing you to maximize the uptime of your investment.

▶▶ Rotary cutter bar allows for harvesting speeds at 10+ MPH while not compromising yield.

▶▶ The drum speed is independent from left and right, controlled by a speed dial from the cab.
